#### **ABSTRACT**

OCR based Aadhar & driving license info Extraction System may be a time period embedded system that mechanically acknowledges the kind of document whether or not it's a Aadhar or driving license and extract the out there info from it. There square measure several applications starting from advanced security systems to common official work. OCR primarily based Aadhar & driving license info Extraction System has advanced characteristics because of various effects like totally different pattern in numerous Aadhar Card, totally different Spacing in text etc. Most of the OCR primarily based info Extraction System square measure designed mistreatment proprietary tools like MATLAB that takes a protracted method and time and conjointly will have many limitations and conjointly they're unable to sight pattern and can't extract the desired info severally. this concept presents an efficient technique of implementing OCR primarily based Aadhar & driving license info Extraction System mistreatment Free software package together with Python and therefore the Open pc Vision Library
